

```
// Java program to demonstrate the usage of
// stripLeading() method in comparison to
// other methods
class Main {
    public static void main(String[] args) {

        // creating a string
        String str = " Hello, World ";

        // print the string without any function
        System.out.println("String is");
        System.out.println("#" + str + "#");
        System.out.println();

        // using strip() method
        System.out.println("Using strip()");
        System.out.println("#" + str.strip() + "#");
        System.out.println();

        // using stripLeading() method
        System.out.println("Using stripLeading()");
        System.out.println("#" + str.stripLeading() + "#");
        System.out.println();

        // using stripTrailing() method
        System.out.println("Using stripTrailing()");
        System.out.println("#" + str.stripTrailing() + "#");
    }
}
```
